The fewer the number of leaks in your vacuum handling system, the greater the lifting capacity you will have with your vacuum pad attachment. This is where these quality vacuum hose connection accessories really pay for themselves. By selecting and using these connectors with the ANVER High Flow Vacuum Hose, you can achieve virtually airtight connections throughout your system. Wherever you have connections, we recommend that plastic cuffs be used on all hose ends that are clamped onto our metal barbed fittings in addition to using Teflon tape to seal these fittings.

ANVER makes it simple to get the most out of your High-Flow Vacuum Hose applications with this line of durable, easy-to-use connection accessories. We offer everything from a simple hose cuff or barb to our special filter fittings to our unique diverter valve. Sometimes, a small amount of money spent on these accessories can save you from having to buy a larger, more expensive vacuum pump.

**NOTE:** ANVER HPC Series Plastic Hose Connectors and Cuffs work ONLY with ANVER HP Series Plastic Vacuum Hose. Consult ANVER for more information.
