

## **VPE1-GEN3 Series** Vacuum Generators

Doc. No. 13600251C

ANVER's VPE1-GEN3 Series Vac-Packs are suitable for handling non-porous to semi-porous loads. Designed for use with a wide assortment of vacuum pad attachments and lifter assemblies, these high quality Vac-Packs are ruggedly designed for heavy production use. Units are available with heavy duty frames or for mounting remotely.

#### Your Choice of FOUR Control Styles to Suit Your Application

Standard Controls

ESC-AC/DC-AR - Electric Self-Cycling Attach/Release Instant attach/release is provided via the hoist up and down movement. The attach and release alternate each lift cycle for fast, efficient handling. Similar to our popular line of Mechanical Generators. (Not available on VPE1-GEN3-RD or VPE1-GEN3-TD models.)

**Optional Controls** 

#### RCPK-AC/DC-ARI Radio Controlled 3 Button Attach / Release / Interlock Transmitter with Plug-In Receiver

Hand held device with attach, release and safety interlock push buttons with holster mounted on front handlebar. Plugin receiver is mounted on side of vacuum generator.

#### EPK-AC/DC-ARI

**Plug-In Attach/Release/Interlock Control Pendant** Attach/Release momentary switch and safety interlock push-button located on control pendant with 10ft long coiled cord.

#### 34000332

**Plug-In Harness, Customer Radio Receiver Interface** Control Harness allows you to wire your own radio receiver for integration of Attach / Release / Interlock.

## Safety Features

### Load Sensing Lifting Bail with Safety Lock-Out

Pendant controls are only active when the lifter and load are lowered completely to remove the risk of accidental release by the operator. (Not on the VPE1-GEN3-RD Series, which is a standalone version, or the VPE1-GEN3-T, which is a tilter version.) Once on load, attach is almost instantaneous.

Vacuum Control

A solid-state Vacuum Control combines all the required vacuum generator controls in one rugged unit. This controls all vacuum pump functions, safety lights and is fitted with a standard audible vacuum leakage warning system.

#### Audible Vacuum Leakage Warning System

Integrated electronically controlled vacuum loss sensor monitors vacuum level and will sound an alarm if a slow vacuum leak is present when the vacuum level drops to a pre-determined set point.

Vacuum Retention

The system includes an internal check valve to stop loss of vacuum in the event of a power failure (non-porous loads). A 627 cu. in. vacuum reservoir assists in maintaining a safe vacuum level during a power failure (non-porous loads).

## Generator shown with ESC Controls

## Additional Features

#### Indicator Lights

• Green light indicates "safe" vacuum level.

- Red light indicates "unsafe" vacuum level.
- White light indicates "power on."
- **Twist-Lock Power Cord Connectors** The twist-lock receptacles, both the male and female are supplied, which helps prevent accidental disconnection from the power source.

## Vacuum Pump

• High Performance Oil-Less Dry Piston Vacuum Pump Motor Vacuum pump is thermally overload protected and requires 115V/1PH/60Hz\* 15 amps service unless otherwise specified.

Operating Temperature: 35°F to 135°F (1.7°C to 57.2°C)

### Options

#### • **Optional Moisture Traps** (32000216) For damp applications: prevents saturation of filter and possible damage to pump. Not for handling wet loads. Mounts on vacuum manifold.

 \*Optional Generator Configurations Available: In reference to our standard line of Vac-Packs noted above, other configurations and set-ups are available. Contact ANVER for further information and application requirements.
